Subject: Tata PM10 Exceedances - March, June 2021
Date: Wednesday, November 3, 2021 3:38:38 PM

Albion and Adam,
Tata reported 24-hour PM10 exceedances at their Site 1 and Site 4 stations. They indicated it could be due to high wind and may be considered as an exceptional event.

I pasted below the list of the date, location and value of each exceedance from Monitoring's internal tracking sheet.

Date	AQS Site ID	Owner	Monitor Name	24-hour average (ug/m3)
3/6/2021	56-037-0013	Tata	Site 1	343.6
6/10/2021	56-037-0014	Tata	Site 4	236.2

Please contact Cara or I if you have any questions.

Thanks,
Darla
